

Mail & Deploy meets Power BI

Unlock the full reporting potential of Power BI – automated, governed, and formatted to perfection.

As reporting needs scale with business growth, Power BI remains a powerful tool for interactive dashboards and data visualization. However, when teams need to generate, personalize, and distribute static reports at scale, they often run into serious limitations that hinder automation, flexibility, and secure distribution.

CHALLENGES

Restricted PDF Export capabilities

Manual and time-consuming workflows for sending tailored reports

Lack of control over formatting and layout for branded, multi-page reports

Manual effort required to organize and archive reports

Cloud-dependency, limiting flexibility in secure or on-premise environments

SOLUTION

Export to rich, branded PDFs and other common report formats

Easily set up recurring report delivery for any audience

Deliver reports with full layout control and flexibility

Automate every step of your reporting workflow - from data to delivery

Deliver reports personally, with flexible options - no license required for recipients

With Mail & Deploy, organizations can:

- Simplify and automate your reporting workflows to save time and effort
- Design richly formatted, branded reports across PDF, Excel, Word, PowerPoint and HTML
- Schedule report delivery by user group and/or filter
- Dynamically deliver branded reports to different recipients based on their specific needs
- Generate reports from one or more Power BI datasets, or hybrid/multi-source deployments
- Integrate with multiple data sources, including Qlik, SQL, Snowflake, Big Query and more

By eliminating repetitive manual processes, Mail & Deploy enables teams to focus on delivering insights - not formatting documents. Let's close the reporting gap. For good.

Bridge the Reporting Gap: Power BI + Mail & Deploy = Reporting That Works

True Reporting Automation

Automate report generation and delivery on a daily, weekly, or flexible basis. Eliminate manual tasks and ensure timely, consistent delivery for every stakeholder.

Personalized Distribution

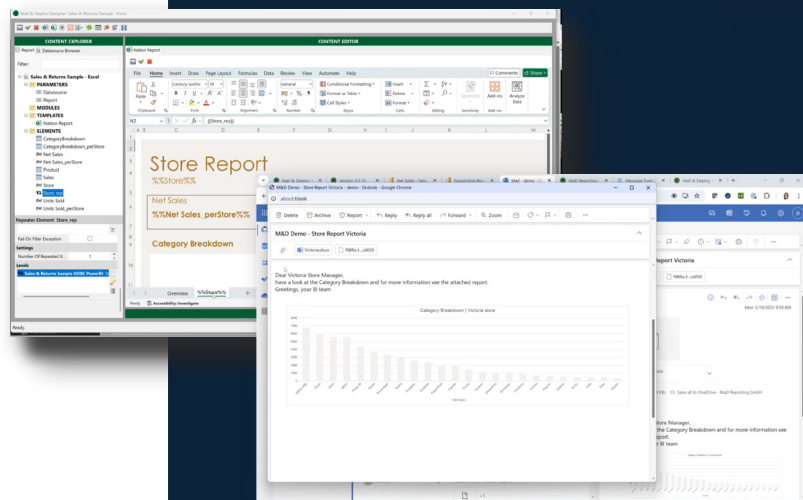

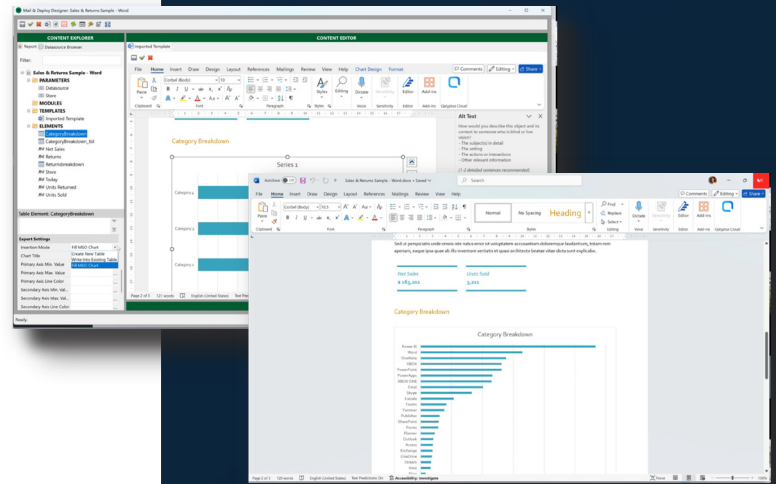

Deliver reports to any channel – from inboxes to cloud storage, portals to APIs – without being tied to Power BI licensing for recipients or ecosystem limitations.

Flexible Output Formats

Render any Power BI report as PDF, PPTX, Excel, HTML, or CSV – apply dynamic filters, language rules, and brand templates to create fully customized outputs.

Seamless Integration with Power BI

No need to change your data model. Mail & Deploy connects directly to your existing Power BI datasets and semantic model in the cloud.

From Interactive to Actionable Power BI tells the story — Mail & Deploy delivers it.

Various Formatting Possibilities

Variety of reporting components

Multiple Templates by Report

Management Report Distribution

Multiple Data Sources

Flexible Data Filtering

Mail & Deploy brings advanced reporting to Power BI - with schedulers, alerts and multi-tenant governance out of the box.

With Mail & Deploy, Power BI evolves from a visualization tool into a complete, governed reporting source. Say goodbye to manual reporting workarounds. Just automated, enterprise-ready reports - delivered where and when you need them.
