

Press Release

Informattec wins Harrer & Partner as new iVIEW reseller for the Austrian market

Informattec and Harrer & Partner combine their expertise to offer Qlik customers in Austria powerful solutions for data governance, ETL automation, and BI migration with iVIEW Dataflow and iVIEW Library.

Muttenz, 21.10.2025 - Informattec, the Swiss Data & AI specialist for data-driven business intelligence solutions, announces its new partnership with Harrer & Partner. The well-established Austrian Qlik partner will act as a reseller for the iVIEW Data Automation Framework, providing its customers with powerful tools for a modern, automated BI landscape.

The iVIEW solution suite, consisting of the modules iVIEW Dataflow and iVIEW Library, brings together proven best practices from numerous Qlik projects in an integrated platform. iVIEW Dataflow automates complex ETL processes and increases efficiency in data management, while iVIEW Library establishes a centralized governance platform for calculations, KPIs, and business logic. Together, both products enable companies to manage QlikView to Qlik Sense or Qlik Cloud migration projects in a structured, transparent, and highly efficient way.

An increasing number of Qlik customers across the DACH region are already relying on iVIEW to simplify, automate, and professionalize their data and analytics processes. As a result, iVIEW is steadily establishing itself as the standard solution for data governance and automation in the Qlik ecosystem.

“We are very pleased about the partnership with Harrer & Partner and the opportunity to jointly help their customers take their Qlik BI landscapes to the next level. iVIEW encapsulates more than 25 years of experience and best practices from countless Qlik projects - bringing this expertise to Austria together with such an established partner as H&P is a fantastic step for us.”

Rino Mentil, CEO & Founder, Informattec

Harrer & Partner also sees clear strategic value in expanding its portfolio with this cooperation:

“iVIEW Dataflow and iVIEW Library are the perfect complement to Qlik Sense for us - because they automate data flows, simplify governance, and help our customers to professionalize their BI environments in a sustainable way.”

Elfriede Harrer, CEO, Harrer & Partner

With this partnership, Informattec strengthens its market presence in Austria and provides companies with an innovative platform to further develop their data processes efficiently, transparently, and with AI-driven intelligence.
