

iVIEW learns planning, thanks to Jedox

iVIEW learns planning. Informattec, specialist in business intelligence solutions (BI) for Swiss SMEs has formed a strategic partnership with Jedox and expanded their individual standard BI tool iVIEW to incorporate contemporary planning functions.

Muttenz, November 16th, 2015 - Informattec boosts the further development of their BI framework iVIEW. They have signed a strategic partnership with Jedox, their globally active specialist brand for BI solutions for business users, and integrated the planning functions of the Jedox suite into their entire iVIEW range. Thus iVIEW comes a significant step closer to the long-term vision of a technology-neutral BI platform for ambitious SMEs and complements its architecture, in addition to QlikView and Qlik Sense, with further technology in the business intelligence environment.

Modern BI must look to the future

Sound target figures are already available in most companies. The real challenge is the integration of these future values into the process of the systematic analysis of historical business data. Rapidly increasing customer needs do not just involve a simple integration, but rather the aim is an intelligent combination of the past and the future. This is in the first place to make even possible a secure and reliable business management. This is just where the connection with iVIEW and Jedox comes in.

Thus, in an initial step the new planning functionality is made available for the users of iVIEW for ABACUS. In an additional register, in future they will plan all the company's costs and income areas individually, bringing these results together in the tried and trusted simple operation of iVIEW, with all the usual evaluations. The planning data can be changed ad hoc by the user, permanently or temporarily, and resaved directly in ABACUS. Thus, in addition to its BI role, iVIEW for ABACUS assumes the role of a workflow-based planning tool, thereby conveniently presenting the user with all necessary planning and evaluation functions in one place. The annoying switching between ABACUS and a BI tool is a thing of the past for users of iVIEW for ABACUS.

«After we have completed the implementation of the planning functions of Jedox in iVIEW for ABACUS, we shall focus on integration into the rest of the iVIEW range. We shall also deliver, for example, iVIEW.Portal and iVIEW.Framework with Jedox planning," says Informattec Chief Developer Flávio Soares." «Thus we can offer our customers, and those interested in BI, a unique planning and evaluation platform suitable for discerning SMEs and help them to effectively lead their company safely and reliably into the future,» says Philipp Manto, Business Service Manager and member of the Executive Board at Informattec.
